We make products from nature with love

BiOBUDDi believes it is possible to play and have fun with toys without harming the environment. That's the reason we produce environmentally friendly toys for children.

Nous fabriquons avec Amour des produits à partir de matières naturelles

BiOBUDDi croit qu'il est possible de jouer et s'amuser sans nuire à l'environnement.

C'est la raison pour laquelle nous avons décidé de produire des jouets qui le respectent.

Fabricamos productos con amor a partir de materias naturales.

En BiOBUDDi creemos que es posible jugar y divertirse con juguetes sin dañar el medioambiente.

Esa es la razón por la que producimos juguetes ecológicos para los niños.

The Earth

Everyone has the right to consume products that are safe for their health and safe for the environment that they live in. That's why before learning more about BiOBUDDi, we want to tell you a few important things about our planet:

Global warming

You've probably heard of **global warming**. It happens because today we use energy for everything we do. Producing this energy releases carbon dioxide (CO²) into the air. This CO² contributes to the greenhouse effect, which increases global warming.

Our goal is to be part of ending this harmful cycle. Let's have a positive impact on our planet earth.

Notre planète Terre

Chacun a le droit de consommer des produits bons pour la santé et respectueux de l'environnement. C'est pourquoi avant de vous en dire plus sur BiOBUDDi, nous souhaitons vous rappeler certaines choses importantes à propos de notre planète.

Réchauffement climatique

Vous avez certainement entendu parler du réchauffement de la planète. Ce phénomène se produit aujourd'hui car nous utilisons beaucoup d'énergie pour toutes nos activités. Produire cette énergie libère du dioxyde de carbone (CO₂) dans l'air. Ce CO₂ contribue à l'effet de serre accélérant ainsi réchauffement climatique.

Ayons un impact positif sur notre planète Terre! Notre but est de réduire ce cycle nuisible à notre environnement.

Preservar el planeta

Todos tenemos derecho a consumir productos seguros para nuestra salud y para el medio ambiente en el que vivimos. Por ello, antes de saber más sobre BiOBUDDi, queremos contarle algunas cosas importantes sobre nuestro planeta:

Calentamiento global

Usted probablemente ha oído hablar del calentamiento global. Sucede porque hoy utilizamos energía para todo lo que hacemos. La producción de esta energía libera dióxido de carbono (CO²) en el aire. Este CO² contribuye al efecto invernadero, que aumenta el calentamiento global.

Nuestro objetivo es poner fin a este ciclo dañino. Hagamos que nuestro impacto sea positivo en nuestro planeta tierra.

BiOBUDDi

How is it produced?

Cycle de production ¿Como se produce?

EN Sugarcane absorbs carbon gas from the air as it grows. This reduces the CO₂ in the atmosphere.

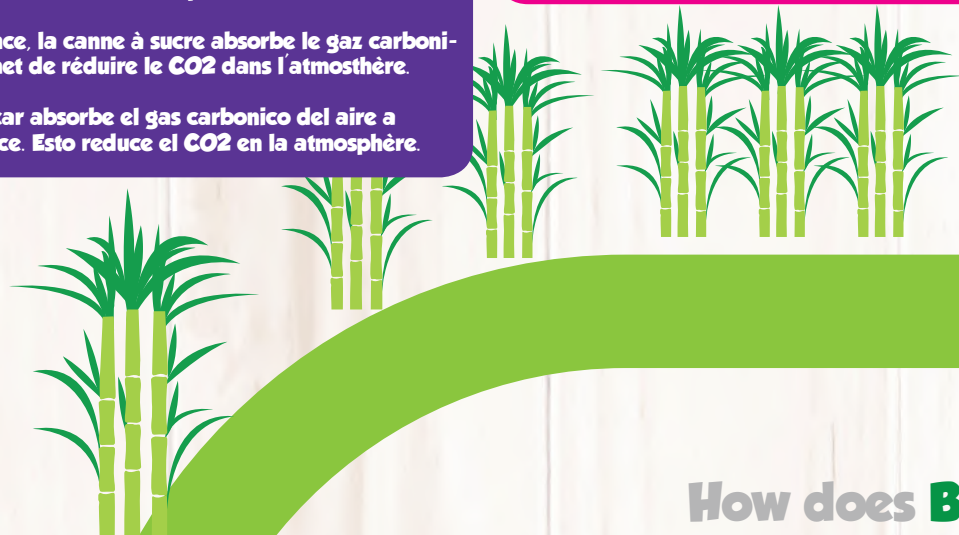

FR Pour sa croissance, la canne à sucre absorbe le gaz carbonique ce qui permet de réduire le CO₂ dans l'atmosphère.

ES La cana de azucar absorbe el gas carbonico del aire a medida que crece. Esto reduce el CO₂ en la atmósfera.

EN Sugarcane is planted to use in many products like, food, clothing and medicine, but not the whole sugarcane.

FR La canne à sucre est planté pour l'usage de beaucoup de produits tels que la nourriture, l'habillement et les médicaments mais pas en totalité.

ES La cana de azucar se cultiva para la produccion de comida, ropa y medicinas, pero no se utiliza toda la cana de azucar.

How does BiOBUDDi make their products?

Comment sont fabriqués les BiOBUDDi?

¿Como elabora BiOBUDDi sus productos?

EN When humans use energy in their day-to-day activities CO₂ is released into the air.

FR Quand les hommes utilisent de l'énergie pour leurs activités quotidiennes, le CO₂ est rejeté dans l'air.

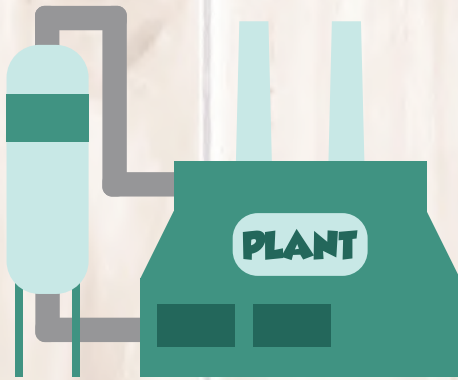

ES Cuando los seres humanos utilizan la energia en sus actividades cotidianas se libera CO₂ en el aire.

EN The leftovers of sugarcane are used by mills as raw material and is transformed into "ethanol" a type of alcohol.

FR Les restes de la canne à sucre sont utilisés par les usines comme matière première et sont transformés en un type d'alcool appelé éthanol.

ES Los restos de la caña de azúcar son utilizados por los molinos como materia prima y se transforman en "etanol".

EN This ethanol is then used to make Green PE (Green Polyethylene).

FR Cet éthanol est ensuite utilisé pour fabriquer de Polyéthylène vert.

ES Este etanol se utiliza para hacer polietileno verde.

EN The Green PE is used for making the BiBUDDi products in the Netherlands.

FR Ce PE Vert est utilisé pour la fabrication des produits BiBUDDi aux Pays Bas.

ES El polietileno verde se utiliza para fabricar los productos BiBUDDi en los Países Bajos.

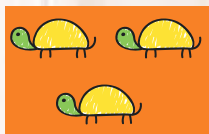

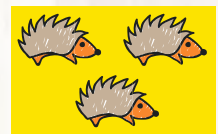

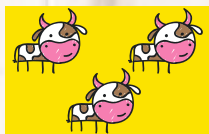

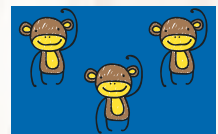

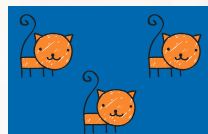

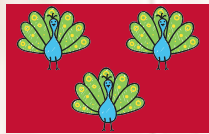

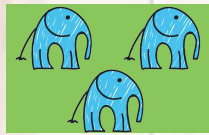

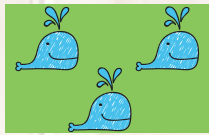

EN The products are recyclable. The material can be used for new products.

FR Les produits sont recyclables et peuvent ainsi être réutilisés pour la production d'autres matériaux.

ES Los productos son reciclables. El material se puede utilizar para nuevos productos.

Let's have a positive impact on the planet!

BiOBUDDi is committed to build a better tomorrow, and for this reason starts producing sustainable and environment -friendly building blocks made of new biobased materials.

Regulators increasingly warn of unsafe toys that fail to meet safety requirements. The checks have been tightened with more recalls as a result. The desire for environment-friendly and safer toys is greater among parents, according to research.

Our new "green" biobased building blocks are derived from plants, not oil. We also do not add any oil-based chemicals during the manufacturing process to "enhance" the performance or color of our product.

The packaging, stickers, instructions and glue are also eco-friendly. The new "green" biobased building blocks are produced in the Netherlands.

"We shall require a substantially new manner of thinking if mankind is to survive."

-Albert Einstein-
(1879-1955)

Agissons en faveur de la planète!

BiOBUDDi s'engage à construire un avenir meilleur. L'entreprise se lance donc dans la production de blocs de construction durables et écologiques, avec des matériaux d'origine biologique.

Les organismes de contrôle signalent de plus en plus de jouets dangereux qui ne répondent pas aux exigences en matière de sécurité. Les contrôles ont été renforcés, ce qui a augmenté le nombre de rappels. Les études révèlent par ailleurs que les parents recherchent davantage de jouets plus sûrs et respectueux de l'environnement.

Nos nouveaux blocs de construction "verts" et fabriqués à partir de matériaux d'origine biologique sont produits à partir de végétaux et non de pétrole. Nous n'ajoutons pas non plus de substances chimiques pétrolières durant le processus de fabrication pour "améliorer" les performances ou la couleur de nos produits.

L'emballage, les étiquettes, les instructions d'utilisation et la colle sont également écologiques. Les nouveaux blocs de construction "verts" et fabriqués à partir de matériaux d'origine biologique sont produits aux Pays-Bas.

"Une nouvelle manière de penser est nécessaire si l'humanité veut survivre."

-Albert Einstein-
(1879-1955)

¡Dejemos un impacto positivo en el planeta!

BiOBUDDi esta comprometido con la construcción de un mejor mañana, por esta razón hemos comenzado a producir bloques de construcción sustentables y amigables con el ambiente ya que son basados en nuevos materiales biológicos.

Las agencias de regulación advierten cada vez más sobre juguetes que no alcanzan los requerimientos de seguridad. Los controles se han hecho más rigurosos ocasionando más rechazos de productos. De acuerdo a investigaciones, la demanda de juguetes más seguros y amigables con el ambiente está siendo más popular entre los padres de familia.

Nuestros nuevos bloques de construcción basados en materiales biológicos son "verdes" porque provienen de las plantas y no del aceite. Además, no agregamos ningún químico procedente del aceite durante nuestro proceso de producción para incrementar el desempeño o el color de nuestro producto.

El empaque, estampillas, instrucciones y pegamento también son amigables con el ambiente. Los nuevos bloques de construcción verdes con materiales biológicos se producen 100% en los Países Bajos.

"Requerimos de una manera de pensar sustancialmente nueva si el ser humano habrá de sobrevivir"

-Albert Einstein-
